

# DM-20

## Multi-Parameter Hemodynamic Monitoring System

The DM-20 provides non-invasive and continuous assessment of Central Venous Pressure, Jugular Venous Oxygen Saturation, Pulse Oximetry and Cardiac Output

### Ideal for use in:

- ICU
- Emergency
- Long Term Care
- Anesthesia
- Heart Failure Clinics
- Post-Acute Care Facilities

### Clinical Applications:

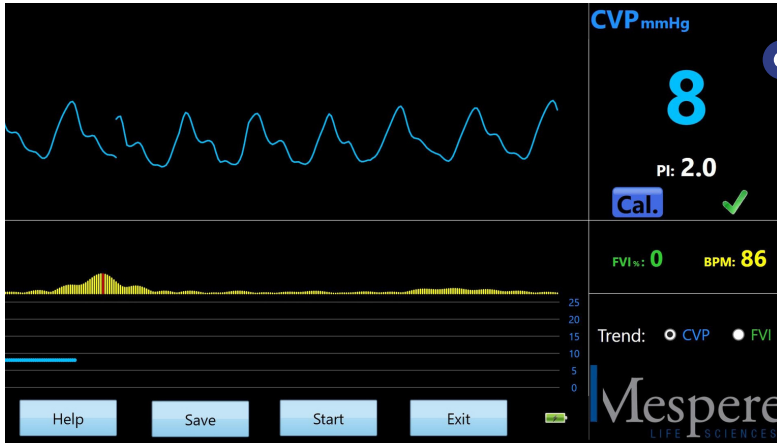

- Sepsis fluid overload and tissue reperfusion
- Cardiac output monitoring through Fick's Principle
- Fluid responsiveness prediction
- Cerebral tissue perfusion monitoring
- Post cardiac surgery monitoring

# DM-20

## Multi-Parameter Hemodynamic Monitoring System

### KEY ATTRIBUTES

Innovative technology providing a safer and non-invasive method to conduct monitoring of:

### Central Venous Pressure

**CVP - Central Venous Pressure**

FVI - Fluid Variation Index

PI - Pulse Strength Index

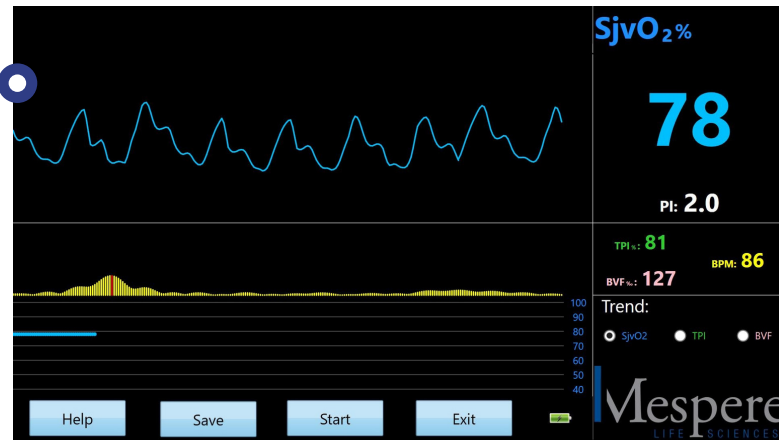

### Venous Oximetry

**SjvO<sub>2</sub> - Jugular Venous Oxygen Saturation**

TPI - Tissue Perfusion Index

BVF - Blood Volume Fraction

PI - Pulse Strength Index

### VenArt Dual Oximetry

**SjvO<sub>2</sub> - Jugular Venous Oxygen Saturation**

TPI - Tissue Perfusion Index

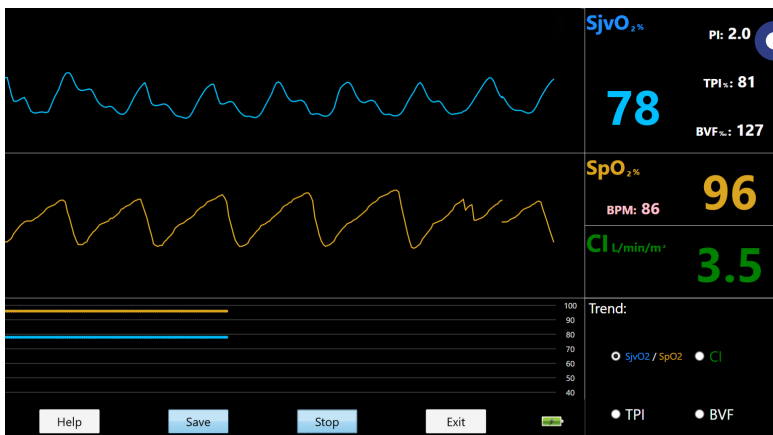

BVF - Blood Volume Fraction

PI - Pulse Strength Index

**SpO<sub>2</sub> - Arterial Oxygen Saturation**

BPM - Heart Rate

**CI - Cardiac Index**
